

## RefreshMed - Procedures Offered

### Face Treatments:

#### Surgical Procedures

Facelift	A facelift restores smoother, more pleasing contours to your face and neck.
Eyelid Surgery	Refreshes your appearance, with a younger, firmer eye area.
Nose Reshaping Surgery	Improves proportion of your nose, enhancing facial overall appearance and self confidence.
Chin Augmentation	Improves the facial harmony by enhancing the appearance of a person's chin.
Cheek Augmentation	Brings balance to the facial structure by correcting a deficient cheek area. Prominent cheek bones improve facial contour and accentuate the eyes.

#### Non-Surgical Procedures

Botox	The botulinum toxin can be used safely to reduce the appearance of facial lines and wrinkles caused by the muscles, specifically those muscles that contract during facial expressions such as frowning or squinting.
Dermal Fillers	Used to reverse the effects of aging by reducing or eliminating wrinkles and replacing soft-tissue loss.
Lip Augmentation	Creates fuller, plumper lips and reduces fine wrinkles around the mouth.
Collagen Induction Therapy	Stimulates the skin to produce more of the body's own natural collagen, consequently reducing wrinkles and improving skin texture.
Contour Threads	Elevate sagging facial tissue, especially in the brows, cheeks mid-face and neck.
Laser Resurfacing	Removes areas of damaged or wrinkled skin, layer by layer to minimize the appearance of fine lines or uneven pigmentation.
Microdermabrasion	Reduces fine lines, crow's feet, age spots and acne scars.
Chemical Peel	Involves an application of a chemical solution to sun-damaged, unevenly pigmented, and finely wrinkled facial areas.

## Men's Procedures

### Surgical Procedures

Tummy Tuck	Men who have loose abdominal skin and fat that is concentrated in the abdomen can benefit from abdominoplasty.
Pectoral Implants	Enhances the bulk and projection of your pectoral muscles, but they will not improve the definition of your muscles.
Calf Implants	Involves the surgical insertion of implants into the calves to increase their size and shape.
Buttock Implants	Involves the surgical insertion of implants into the buttocks in order to enhance their size and shape.
Liposuction Body Sculpture	Liposuction is particularly well-suited for men who have isolated pockets of fat that cause certain areas of their body to appear disproportionate.
Male Breast Reduction	Gynecomastia refers to reduction of male breasts by liposuction and/or removing excess glandular tissue.

### Non-Surgical Procedures

Spider Vein Treatment	Sclerotherapy was developed in the 1920s to treat unsightly blood vessels or blood vessel malformations. A solution is injected into the vessels, which makes them shrink and become less visible.
Botox	The botulinum toxin can be used safely to reduce the appearance of facial lines and wrinkles caused by the muscles, specifically those muscles that contract during facial expressions such as frowning or squinting.

## Women's Procedures

### Surgical Procedures

Tummy Tuck	Women who have loose abdominal skin and fat that is concentrated in the abdomen can benefit from abdominoplasty.
Breast Augmentation	Breast augmentation plastic surgery is one of the most common procedures performed annually by members of the American Society for Aesthetic Plastic Surgery.
Breast Lift	Designed to correct the loss of skin elasticity, gravity and other factors such as weight loss, pregnancy and breast-feeding that ultimately affect the shape and firmness of your breasts.
Breast Reduction	Patients who undergo breast reduction surgery frequently are seeking relief from physical symptoms caused by the excessive weight of large breasts.
Liposuction Body Sculpture	Liposuction is particularly well-suited for women and men who are of relatively normal weight but have isolated pockets of fat that cause certain areas of their body to appear disproportionate.
Buttock Implants	Involves the surgical insertion of artificial implants into the buttocks in order to enhance their size and shape.

### Non-Surgical Procedures

Spider Vein Treatment	Sclerotherapy was developed in the 1920s for the treatment of spider veins (telangiectasias), small purple and red blood vessels.
Lipodissolve / Fat Dissolution	Lipodissolve is a non surgical medical procedure that involves the injection of a compound called phosphatidylcholine into small localized fat deposits to dissolve fat.

## Hair Treatments:

Hair Microtransplant	The permanent and scientifically proven solution for baldness.
Laser Hair Removal	A revolution is underway, for permanent body hair removal that is virtually painless.

## Cosmetic Dentistry:

Dental Veneers	Custom-designed shells of tooth-like ceramic material that, when applied over the surface of a tooth, can cover worn tooth enamel, uneven tooth alignment or spacing and chips or cracks.
Dental Crowns	Is a tooth-shaped "cap" that is placed over a tooth – covering the tooth to restore its shape and size, strength, and/or to improve its appearance.
Dental Implants	Offers replacement tooth roots in order to provide a strong foundation for crowns that are made to match your natural teeth.
Teeth Whitening	BriteSmile has a single purpose: brightening lives by brightening smiles.

## Laser Vision Surgery:

Laser Eye Surgery	Laser Eye Surgery and Lasik Intralase are surgical treatments for people who want to eliminate their dependence on glasses or contact lenses.
-------------------	---

## Fertility / Pregnancy:

IVF Fertility	Invitro fertilization (IVF) is the process by which egg cells are fertilized by sperm outside the woman's womb. IVF is a major treatment for infertility in couples.
